Case Study: The "Urgent Scholarship" Phishing Trap

Phishing is when bad people pretend to be organizations, like banks or colleges to get people to give them secret information like passwords or money details. A college student got an email that looked like it was from the colleges Financial Aid Office. The email said there was a problem with a scholarship and they had to click on a link to log in and check their information or they would lose the money.

Step-by-Step Process:

The Bait: The bad person sent an email that looked real with the colleges logo and a message that said they had to act fast.

The Hook: The student felt like they had to hurry so they clicked on the link, which took them to a page that looked just like the college website.

The Theft: When the student put in their username and password the bad person got them away.

The Exploit: The bad person used the students login information to get into their account changed their contact information and started getting the real messages about money that were meant for the student.

Target and Consequences:

College students get targeted a lot because they are just starting to take care of their money and online accounts. What happens when they get tricked is that bad people can steal their identity get into their school records and even take their money if the students bank account is connected to the account that got hacked. The Urgent Scholarship phishing trap is a problem for college students. The college students have to be careful, with the Urgent Scholarship phishing trap.
